Trade Wind Weather Returns During June; Mostly Dry Conditions

Trade wind weather conditions dominated weather during most of June 2009. Winds were light and variable at the beginning and end of the month, while moderate to breezier winds blew during much of the rest of the month. Mostly dry conditions prevailed throughout the State. Precipitation was generally minimal during the first half of the month with increased shower activities during the second half. Most watershed areas of the smaller islands received below normal rainfall amounts for the month. Rainfall totals for the Big Island were near to above normal for most windward locations, but were below normal for the leeward sectors. All of Maui County received below normal rainfall amounts, with leeward sectors being much drier. Precipitation on Oahu was below normal. Rainfall amounts were especially short along the leeward portion of the island. On Kauai, rainfall totals were also below normal for all areas around the island. However, the driest conditions prevailed along the leeward sectors around the west side to the north side of the island. Crops were rated in fair to good condition.

and upcoming harvested acreage.

**June
Review..... page 3**
Production statistics and
comments on selected crops.

The expected vegetable acreage for harvest in July 2009, when compared with acreage harvested in June 2009, was higher for one crop, lower for 6 crops, and unchanged for 4 crops. An increase in acreage for harvest is expected from **sweet corn** (+19%). A decrease in the acreage for harvest is expected from **Chinese cabbage** (-20%), **head cabbage** (-32%), **mustard cabbage** (-13%), **dry onions** (-31%), **green onions** (-10%), and **romaine** (-29%), while the expected acreage for harvest was unchanged for **snap beans**, **cucumbers**, **head lettuce**, and **semi-head lettuce**.

Acreage

Acres planted, harvested, and for harvest for 11 selected vegetables, State of Hawaii.

Crop	Acres planted		Acres harvested		Acres for harvest	
	May 2009	Jun 2009	May 2009	Jun 2009	Jul 2009	Aug 2009
Beans, snap	9	9	11	9	9	8
Cabbage, Chinese	14	9	18	15	12	9
Cabbage, head	23	21	34	38	26	21
Cabbage, mustard	7	7	6	8	7	6

June Review

Sweet Corn Production Below A Month Earlier

Chinese cabbage production totaled an estimated 344,000 pounds in June 2009, a decrease of 34 percent and 28 percent from May 2009 and June 2008, respectively. Fewer acreage for harvest along with lower yields accounted for the drop in production from a month earlier and a year ago. Spraying was necessary to help maintain control of insect infestation. Although temperatures were warm, the crop was still rated in fair to good condition.

Head cabbage growers harvested 945,000 pounds during June 2009, an increase of 1 percent and 27 percent from the previous month and a year earlier, respectively. The slight increase in production from May was the result of more acreage for harvest offsetting the drop in yield. Better yields along with an increase in acreage for harvest accounted for the higher production from a June 2008. Crop condition was rated fair to good.

Sweet corn production totaled 253,000 pounds in June, 16 percent lower than May 2009, but 16 percent higher than June 2008. The drop in production from May was the result of

less acreage available for harvest, while the increase in production from June a year earlier was because of more acreage for harvest. Crop condition was rated fair to good.

Cucumber producers harvested 434,000 pounds in June 2009, a decrease of 7 percent and 15 percent from May 2009 and June 2008, respectively. Lower yields accounted for the decrease in production from both months as the acreage available for harvest was unchanged. The crop was in fair to good condition.

Dry Onions marketings totaled 154,000 pounds for June 2009, a decrease of 49 percent and 33 percent from May 2009 and June 2008, respectively. The crop was in fair to good condition.

Green Onions production was estimated at 125,000 pounds, an increase of 15 percent and 8 percent from May a month earlier and June a year ago, respectively. The crop was rated to be in fair to good condition. ■
